

## Greetings!

With Quickel Paving's impending 10 year anniversary, we would like to celebrate by providing our clients with protection of their investments. It's that time of year with the predominate rains amongst us, asphalt deterioration is common. Potholes occur, cracks appear and the undermining of the base materials are all just a part of the degradation of asphalt. Give us a call so we can put a plan together to patch, repair and seal your asphalt investment today before it becomes costly.

Sincerely,  
**Dan Quickel, President**  
**Quickel Paving**

## Paving Stones - A Colorful Alternative

Interlocking Concrete Paving Stones offer a colorful and exciting alternative to plain concrete or asphalt. Installed over a compacted stone sub-base and a leveling bed of sand, concrete paving stones can be used for walkways, patios, pool decks and driveways. Their 8000 psi compressive strength makes concrete paving stones a superior and more durable choice than clay bricks.

## About Quickel Paving
